

Introducing GKEY

GoldKey Finance is a user-governed financial services provider powered by blockchain and its DeFi derivative. The platform offers decentralized financial services that cushion users from the volatility of centralized financial services that often result from corrupt dealings and poor regulations on the markets.

Driven by users, Goldkey unlocks the full potential of the blockchain system to create decentralized financial products. This system eliminates complexities and vulnerabilities that emerge from erratic events prone to centralized financial systems including economic depressions and instabilities. Goldkey is a trustless system powered by the user, and for the user.

What is GKEY?

A product from GoldKey Finance, GKey is a DeFi protocol that provides users with the best yields in the Ethereum ecosystem, just with an internet connection. GKEY is purposefully unique and provides a fully secure and transparent experience, backed by audited smart contracts and a powerful token system.

GKEY offers a suite of services starting with staking and farming that users can access from one platform.

Features of GKEY

While still in their earliest stages, digital currencies and DeFi are demonstrating impartiality as an option, in contrast to the conventional monetary systems. Here are some features of GKEY:

Decentralization: The DeFi protocol distributes its authority to participants in its ecosystem, rather than individual or central entities. This eliminates risks of compromise that would result from targeted attacks on centralized protocols offering the platform additional layers of security and creating a transparent and trustless ecosystem.

Functionality: GKey is a multifunctional protocol and ERC-20 token. Its decentralized governance makes it a top priority for smart contracts on the Ethereum ecosystem. GKEY offers a suite of services, including staking and farming, that are accessible on a single platform.

Usability: GKEY's platform's design is aimed at simplicity and built on an interactive user interface (UI) to enhance their experience when accessing multiple services that GKEY offers.

GKEY Functionalities

Staking

Unlike other platforms, GKEY offers a fixed rate of return on their staked assets rather than offering an introductory high APR which often diminishes with time.

Returns are guaranteed to be sustainable in the long term, given the token structure, token cap at 6,000,000 GKEY, and no mint provision in the token contract.

Staking is simple and efficient, and with a lockup period of just 48 hours, users can enjoy staking on the GKEY platform. You can withdraw tokens and their interest amount at any time after the lockup period. Claim your earned rewards at no extra fees. By staking, the circulating token supply is limited thus driving GKEY price higher.

Yield Farming

Also referred to as Liquidity Mining, yield farming enables users to earn rewards with their token holdings. GKEY Farming allows you to earn rewards by providing liquidity in a variety of pools available. Users are required to provide liquidity to the Uniswap GKEY-ETH pair via Uniswap pools. This will, in turn, provide guaranteed returns paid from Uniswap fees. Rewards depend on the number of tokens you deposit in the pool.

By providing liquidity, users earn fees directly from Uniswap and get rewarded UNIV2(GKEY-ETH) tokens. It is these tokens that one uses to farm to receive GETH2. Below is an example of vault returns:

If there are 9000 UNI-V2 (GKEY/ETH) pooled tokens in a vault, and a user deposits 1000 UNI-V2, the contract's total balance of UNI-V2(GKEY-ETH) pooled tokens becomes 10,000.

And User A's share now is: $1000 / 10,000 = 10 \%$

*If *B* deposits 10000 more UNI-V2(GKEY-ETH) Pooled tokens to this vault, the contract's total balance of UNI-V2(GKEY-ETH) Pooled tokens becomes 20,000.*

User A's new share becomes: $1000 / 20,000 = 5\%$

If 200 GETH2 tokens are distributed to this vault per month, User A's earnings would be $200 \times \text{his share in } \%$ At 5% share, the earnings would be $200 \times 5\% = 10 \text{ GETH2}$

GKEY 2021 Roadmap Details

Q1 2021:

- Token Creation & Presale
- Marketing
- Exchange Listing
- Liquidity Lock
- Farming Pool Launch

Q2 2021:

- Marketing
- More Exchange Listings
- Audits
- ETH 2.0 Staking Support
- Token Burn & Buybacks

Q3 2021

- Audits
- Partnerships
- Farming Expansion

GKEY Token Allocation

- Presale: 940,000 GKEY
- Airdrop/Bounty to the community: 50,000 GKEY
- Staking: 1,000,000 GKEY
- Uniswap: 1,000,000 GKEY
- Exchange: 2,000,000 GKEY
- Marketing: 500,000 GKEY (Locked for 6 months)
- Team: 500,000 GKEY (Locked for 12 months)
- Reserve: 10,000 GKEY

Finally, GKEY has developed an integrated protocol with a simple and interactive interface that is user-controlled and incentivized to grow users' crypto portfolios through transparency.
